

Project plans (events) — how it works today

The team

picks a name via "Acting as" — no real login yet

▼ starts here

Homepage — create an event

two ways

- Structured — pick the activations, pulls the matching tasks from your library (no AI)
- Or describe it to Claude — Claude drafts the whole plan

▼ opens the plan

Event board — the working view

tasks by workstream · owners · dates · activations · comments · attachments · seating · reports

▼ uses

Claude API

generate plan · add to plan · reports & dashboards

▼ reads & writes

Supabase — the database

projects · workstreams · tasks · library · comments · attachments

▼ two-way sync

Slack — per-event channel

BUILT · CURRENTLY DORMANT (no bot invited)

status → Slack · ☐ react → done · replies → comments

▼ built & hosted on

FOUNDATION — HOW THE APP IS BUILT & RUNS

GitHub

stores the code

Vercel

builds it & hosts the live app
